

RM-10352 is a petition to limit wideband modes (SSB, AM and SSTV) to 1.843-2.000 MHz which effectively protects the area below 1840 exclusively for CW and narrowband digital. This Petition is consistent with the recently revised ARRL Bandplan and with all 3 IARU Regional Bandplans.

As a regular user of this spectrum for communications with other amateurs around the world I support this Action. Thank you.

Bill Preston, KL7XX
